USER MANUAL · VERSION 1.1

Amazon Orders Converter

How to turn Amazon order reports into Gardners i12 .ORD order files, one file per order.

Amazon Orders Converter v1.1 · © 2026 NS Nexus Limited. All rights reserved.

Contents

Section	What it covers
1. About the converter	What it does and the five steps
2. Getting the reports from Amazon	Which reports to download and where to find them
3. Using the converter	Settings, uploading, reviewing, fixing warnings and downloading
4. Settings reference	Every field in the Settings panel
5. Inside an .ORD file	How the Gardners order files are built
6. Troubleshooting	Common problems and how to fix them
7. Daily checklist	The routine to follow every day

1. About the converter

The Amazon Orders Converter turns the order reports you download from Amazon Seller Central into Gardners i12 order files (.ORD). Each Amazon order becomes one file, ready to send to Gardners for fulfilment.

What you put in	What you get out
Unshipped Orders report (.txt) from Amazon, with customer names and addresses	One Gardners .ORD file per Amazon order
All Orders report (.txt) from Amazon, with the prices customers paid (optional)	Orders with several books become one file with a line per book

Good to know

- **Your data stays on your computer.** The reports are read inside your web browser. No order data is uploaded to the server.
- **Files are named for you.** Each file name is built from your Gardners Account ID, today's date and the Amazon order number.
- **You stay in control.** Every order is shown on screen before you download it, and prices can be changed.

The five steps

1. **Download** the Unshipped Orders and All Orders reports from Seller Central.
2. **Check settings,** especially your Gardners Account ID.
3. **Upload** both report files to the converter.
4. **Review** each order and fix anything flagged in yellow.
5. **Download** the .ORD files, one per order or all together as a .zip.

2. Getting the reports from Amazon

The converter needs the Unshipped Orders report. The All Orders report is optional but recommended, because it adds the price each customer paid.

2.1 Unshipped Orders report (required)

This report holds the customer's name, delivery address, the book (SKU/ISBN) and the quantity to send. Orders are built from this report.

1. In Seller Central, go to **Orders → Order Reports**.
2. Open the **Unshipped Orders** tab.
3. Click **Request Download**. After a minute or two, refresh the page and click **Download**.

2.2 All Orders report (optional)

This report adds the item price and any delivery charge for each book. Without it, you can type the prices in yourself.

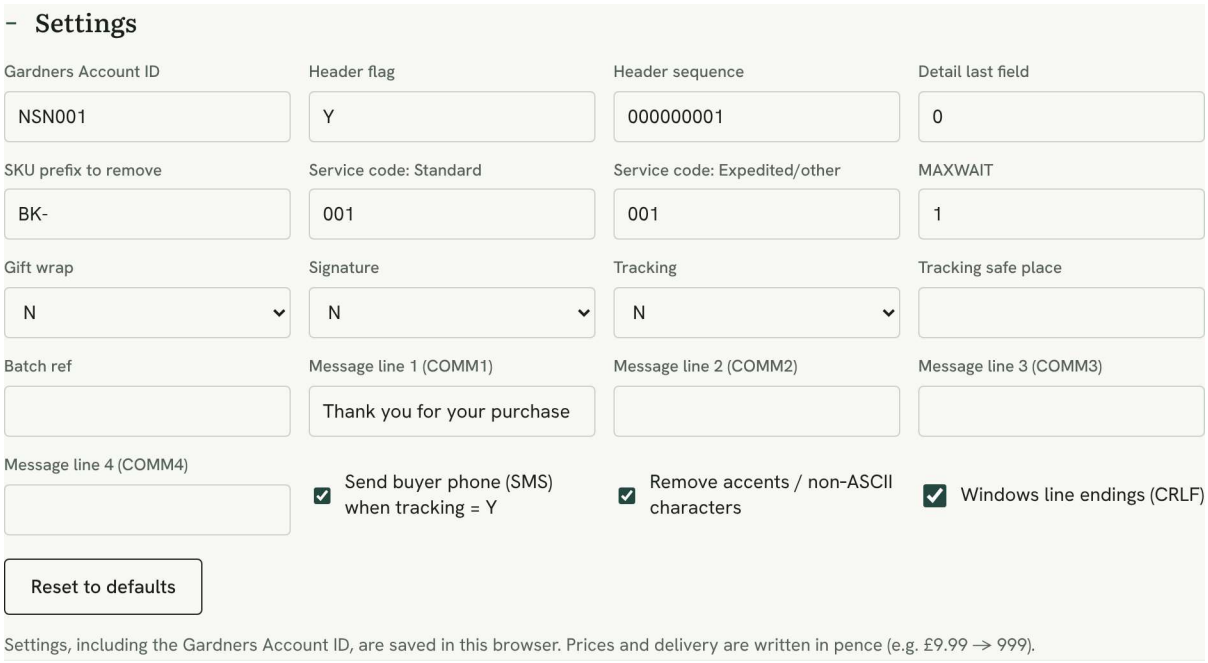

1. Go to **Reports → Fulfillment**, then choose **All Orders** under Sales.
2. Set the date to **Exact date** and pick the day you need.
3. Click **Request .txt Download** and download the file when it's ready.

> **Tip:** upload the .txt files exactly as Amazon gives them. Opening and saving them in Excel first can change order numbers and break the conversion.

3. Using the converter

3.1 Check your settings

Click **Settings** to open the panel. The first field, **Gardners Account ID**, is the most important: it is written into every file and used in every file name. Downloads stay switched off until it is filled in.

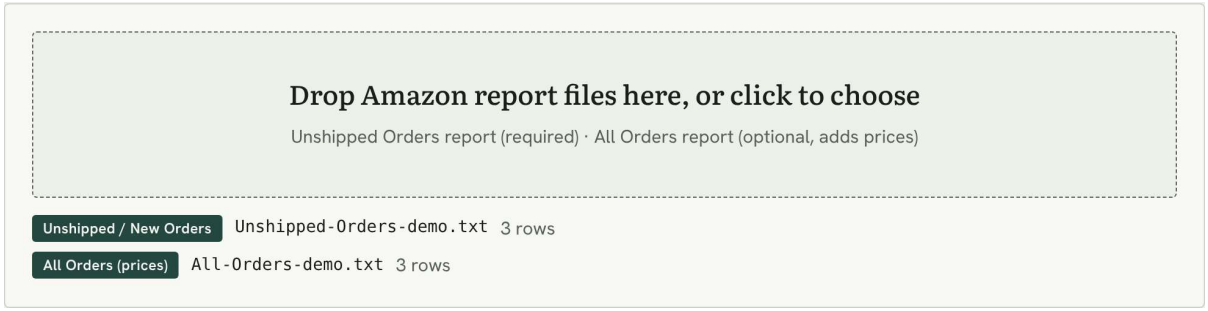

The Settings panel

- **Saved automatically.** Settings are remembered in your browser, so you normally set them once.
- **Ready to use.** All other fields are pre-filled with values from Gardners' sample files. See section 4 for what each one does.
- **Reset to defaults** puts every field back to its original value.

3.2 Upload the report files

Drag both .txt files onto the upload box, or click the box and choose them. You can add them together or one at a time, in any order.

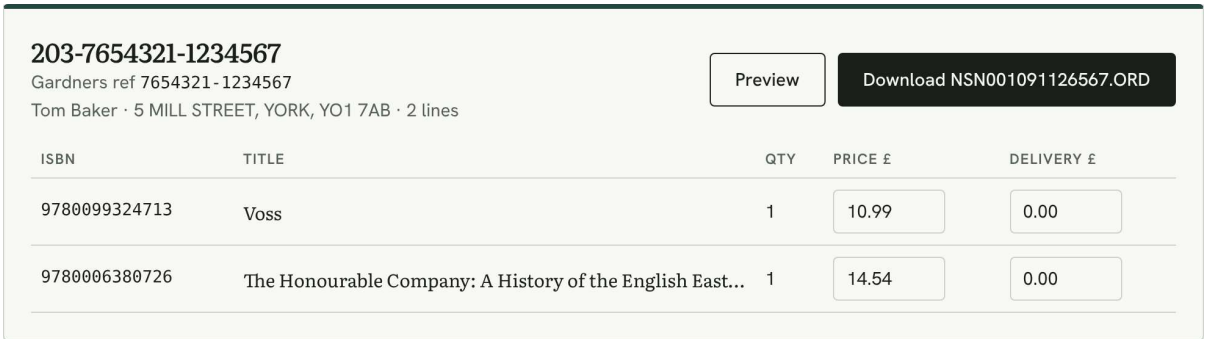

Both files uploaded and recognised

- **Check the labels.** Each file gets a label: "Unshipped / New Orders" or "All Orders (prices)". A red label means the file wasn't recognised.
- **Add more at any time.** New files are merged with what's already loaded; an order that appears twice is only listed once.
- **Start fresh each day.** Press Clear before a new batch so yesterday's orders don't mix in.

3.3 Review each order

Every order appears as a card. Check it before downloading.

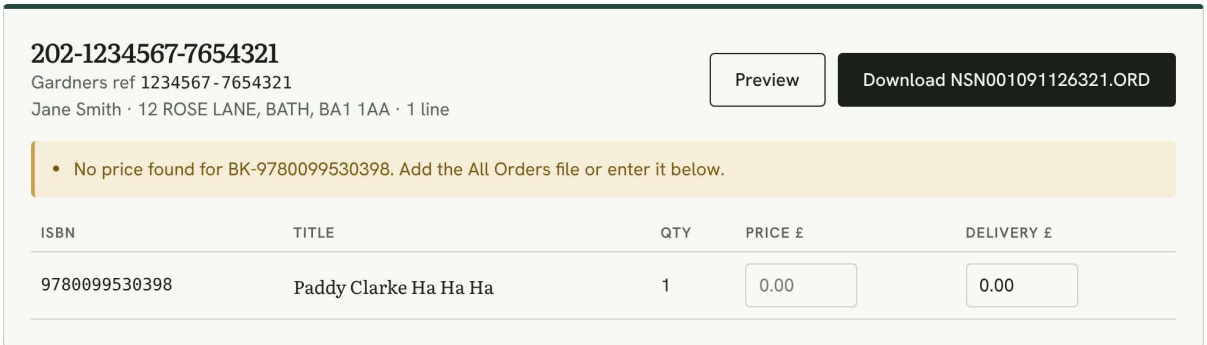

An order with two books

On the card	What it means
Amazon order number	The order as it appears in Seller Central, e.g. 203-7654321-1234567
Gardners ref	The reference sent to Gardners: the order number without its first block (15 characters max)
Name and address	The delivery details that go into the file
ISBN, title, quantity	One row per book. The ISBN comes from your SKU with the prefix removed
Price £ and Delivery £	Taken from the All Orders report. You can change them, and your values go into the file
Preview	Shows the exact contents of the .ORD file

3.4 Fix anything flagged in yellow

A yellow box on a card means something needs your attention. The order can still be downloaded, so always check before sending it to Gardners.

A missing price warning

Warning	What to do
No price found	Add the All Orders report, or type the price into the Price £ box
SKU doesn't give a valid ISBN	Check the SKU in Amazon. Items that aren't books can't be ordered from Gardners
Delivery address line 1 is empty / Postcode is empty	Check the order's address in Seller Central

Warning	What to do
Unknown country code	Confirm with Gardners that they can deliver to that country
Another order today ends in the same 3 digits	Both orders get the same file name. Download them one at a time
Nothing left to ship on this order	It has already been shipped, so no file is needed

3.5 Download the .ORD files

Use **Download** on an order card to save that order, or **Download all (.zip)** to save every ready order in one zip file.

The order summary and Download all button

Each file name is made of four parts:

Part	Example	Meaning
Gardners Account ID	`NSN001`	From Settings
Date	`091126`	Today's date as DDMMYY (9 November 2026)
Order digits	`567`	The last 3 digits of the Amazon order number
Extension	`.ORD`	The Gardners order file type

Full example: **`NSN001091126567.ORD`**

4. Settings reference

All fields in the Settings panel. Fields marked “Confirm” have a meaning that isn’t documented in Gardners’ samples; check them with Gardners before going live.

Field	Default	What it does
Gardners Account ID	NSN001	Your Gardners account. Written on the HEADER line and used in file names. Required.
Header flag	Y	The 4th value on the HEADER line. Confirm its meaning with Gardners.
Header sequence	000000001	Batch number on the HEADER line. Stays at 1 because each file holds one order.
Detail last field	0	Last value on each DETAIL line. Confirm its meaning with Gardners.
SKU prefix to remove	BK-	Removed from the Amazon SKU to give the ISBN.
Service code: Standard	001	Gardners delivery service for Standard orders. Confirm the code list with Gardners.
Service code: Expedited/other	001	Service for Expedited or Next Day orders.
MAXWAIT	1	Likely the days to wait for stock. Confirm with Gardners.
Gift wrap	N	Y asks Gardners to gift-wrap the order.
Signature	N	Y asks for signed-for delivery.
Tracking	N	Y asks for a tracked service.
Tracking safe place	(blank)	Optional safe-place note for the courier.
Batch ref	(blank)	Optional label of your own for a group of orders.
Message lines 1 to 4	Thank you for your purchase	Text printed on the despatch note in the parcel.
Send buyer phone (SMS) when tracking = Y	On	Adds the customer’s phone for SMS tracking. The email is always included.
Remove accents / non-ASCII characters	On	Turns é into e and similar, so names don’t break. Keep it on.
Windows line endings (CRLF)	On	Matches Gardners’ sample files. Keep it on.

5. Inside an .ORD file

You don't need to edit .ORD files, but it helps to know how they're built. Use Preview on any order to see its file.

Line	Appears	Contains
HEADER	Once, at the top	Your Gardners Account ID, the date and the batch number
DETAIL	Once per book	Line number, Gardners ref, ISBN and quantity, followed by the customer, address, price, delivery and service lines
TRAILER	Once, at the end	The number of DETAIL lines in the file

Single-line order (one book)

```
"HEADER","NSN001","09/11/2026","Y","000000001"
"DETAIL",000000001,"1234567-7654321","9780099530398",1,0
"INITIALS","J"  "INAME","Smith"  "IADDR1","12 ROSE LANE" ...
"PRICE",999  "DELIVERY",0  "SERVICE",001 ...
"TRAILER",000001
```

Multi-line order (two books, one file)

```
"HEADER","NSN001","09/11/2026","Y","000000001"
"DETAIL",000000001,"7654321-1234567","9780099324713",1,0
   customer, address, price for book 1 ...
"DETAIL",000000002,"7654321-1234567","9780006380726",1,0
   customer, address, price for book 2 ...
"TRAILER",000002
```

Prices are written in pence: £9.99 becomes 999.

6. Troubleshooting

What you see	Why	What to do
"No orders found"	Only the All Orders report is loaded. It has no addresses.	Add the Unshipped Orders report.
Download buttons are grey	The Gardners Account ID is empty, or no orders are loaded.	Fill in the Account ID in Settings and upload the Unshipped Orders report.
Prices are missing	Clear or a page reload empties all loaded files.	Drop the All Orders report in again.
An order is missing	Orders already marked as shipped in Amazon aren't in the Unshipped report.	Check the order's status in Seller Central.
A file shows a red label	The file isn't an Amazon order report the converter recognises.	Download the report again, and don't open or save it in Excel first.

7. Daily checklist

1. Download the Unshipped Orders and All Orders reports from Seller Central.
2. Open the converter and press Clear.
3. Drop both .txt files onto the upload box.
4. Check every order card and fix any yellow warnings.
5. Download the .ORD files, or all of them as one .zip.
6. Send the files to Gardners.
